CELL CALCIUM

Cell Calcium (1991) 12, 755–759
© Longman Group UK Ltd 1991

Subject Index to Volume 12

A

Acetylcholine and cholecystokinin induce different patterns of oscillating calcium signals in pancreatic acinar cells, 145–151

ACTH and angiotensin II on cytosolic calcium in cultured adrenal glomerulosa cells, effects of, role of cAMP production in the ACTH effect, 655–673

Adenylyl cyclase (cardiac), calcium inhibition of, evidence for two distinct sites of inhibition, 19–28

Adrenal cortex (bovine), two calcium transport systems are distinguished on the basis of their Mg^{2+} dependency in a post-nuclear particulate fraction of, 51–60

Adrenal glomerulosa cells, effects of Angiotensin II and ACTH on cytosolic calcium in, role of cAMP production in the ACTH effect, 655–673

Aequorin solutions for the measurement of cellular Ca^{2+}, preparation and handling of, 635–644

Alloxan inactivation of calmodulin-dependent protein kinase II, biochemical basis for the specificity of, 351–359

Ammonium ions mobilize calcium from an internal pool which is insensitive to TRH and ionomycin in bovine anterior pituitary cells, 301–312

Angiotensin II and ACTH on cytosolic calcium in cultured adrenal glomerulosa cells, effects of, role of cAMP production in the ACTH effect, 655–673

Astrocytes, Ca^{2+} waves in, 185–204

B

Barbiturates inhibit intracellular Ca^{2+} rise induced by thrombin in rat platelets, 645–654

Barium currents in developing skeletal muscle cells of normal and mutant mice foetuses with 'muscular dysgenesis', 727–733

Biochemical basis for the specificity of alloxan inactivation of calmodulin-dependent protein kinase II, 351–359

C

Ca-EGTA association constant (apparent) for temperature and ionic strength, determination of Fura–2 dissociation constants following adjustment of the, 279–287

Ca^{2+} waves in astrocytes, 185–204

Ca^{2+}-dependent and independent mitochondrial damage in hepatocellular injury, 335–341

Calcium export by sodium-calcium exchange in bovine chromaffin cells, 493–504

Calcium oscillations in endothelial cells, 127–134

Calmidazolium and trifluoperazine, effects of, regulation of intracellular calcium homeostasis in *Trypanosoma cruzi*, 361–369

Calmodulin in adult *Xenopus* leg muscle, neural regulation of, 683–693

Calmodulin-dependent protein kinase II, biochemical basis for the specificity of alloxan inactivation of, 351–359

cAMP production (role of) in the ACTH effect, effects of ACTH and angiotensin II on cytosolic calcium in cultured adrenal glomerulosa cells, 655–673

CD_3-induced Ca^{2+} signals in Jurkat T-cells, inhibition of, by myristic acid, 449–455

Channels (calcium) in PDGF-stimulated A172 cells open after intracellular calcium release and are not voltage-dependent, 477–491

Cholecystokinin and acetylcholine induce different patterns of oscillating calcium signals in pancreatic acinar cells, 145–151

Chromaffin (bovine) cells, calcium export by Na^+/Ca^{2+} exchange in, 493–504

Chromaffin cells (adrenal), dose-dependency in spatial dynamics of $[Ca^{2+}]_c$ in, 523–531

CICR of signal-induced Ca^{2+} oscillations, model based on, 73–85

Compartmental analysis of $^{45}Ca^{2+}$ efflux in perfused rat liver, effects of hormonal stimulation, 743–753

Cytokinin increases intracellular Ca^{2+} in *Funaria*, detection with Indo–1, 675–681
Cytoplasmic calcium oscillations, a two pool model, 63–72
Cytosolic free calcium, high levels of, inhibit dephosphorylation of insulin receptor and glycogen synthase, 423–430
Cytosolic, high and low, Ca^{2+}-induced macrophage death? (Hypothesis), 381–384

D

Decavanadate displaces inositol 1,4,5 trisphosphate (IP_3) from its receptor and inhibits IP_3 induced Ca^{2+} release in permeabilized pancreatic acinar cells, 735–742
Depolarization enhances the effects, inositol 1,4,5-trisphosphate increases myoplasmic $[Ca^{2+}]$ in isolated muscle fibers, 543–557
Depolarization, role of, nitrendipine-induced inhibition of calcium influx in a human T-cell clone, 313–323
Digitonin-aided loading of Fluo–3 into embryogenic plant cells, 515–521
Diphenylamine-2-carboxylate (DPC) reduces calcium influx in a mouse mandibular cell line (ST885), 441–447
Dose-dependency in spatial dynamics of $[Ca^{2+}]_c$ in adrenal chromaffin cells, 523–531
Dose-dependency in spatial dynamics of $[Ca^{2+}]_c$ in pancreatic acinar cells, 533–542

E

Ehrlich ascites tumor cells, effects of Fe^{3+}-tumor cell interaction on, 371–374
Endocardial calcium (intracellular) and myocardial function in rat hearts, 39–50
Endoplasmic reticulum and mitochondria in relation to fertilization, roles of calcium pools in sea urchin eggs, 289–299
Endothelial cells, calcium oscillations in, 127–134

F

Fe^{3+}-tumor cell interaction, effects of, on Ca^{2+}-uptake by Ehrlich ascites tumor cells, 371–374
Fertilization, endoplasmic reticulum and mitochondria in relation to, roles of calcium pools in sea urchin eggs, 289–299
Fibroblasts (REF52), cytosolic Ca^{2+} oscillations in, Ca^{2+}-stimulated IP_3 production or voltage-dependent Ca^{2+} channels as key positive feedback elements, 153–164
Fluo–3, digitonin-aided loading of, into embryogenic plant cells, 515–521
Fluorescence digital image analysis of serotonin-induced calcium oscillations in single blood platelets, 177–184
Funaria, detection with Indo–1 of cytokinin increases intracellular Ca^{2+} in, 675–681
Fura–2 and patch clamp analysis, Ca^{2+} oscillations induced by histamine H_1 receptor stimulation in HeLa cells, 165–176
Fura–2 and the ratio method for determination of intracellular Ca^{2+} concentrations, reassessment of, 29–38
Fura–2 dissociation constants following adjustment of the apparent Ca–EGTA association constant for temperature and ionic strength, determination of , 279–287
Fura–2, spectra of intracellular, 385–393
Fura–2 used to study intracellular free calcium concentration in the blowfly retina, 695–712

G

Glucose, tolbutamide and K^+ induce heterogeneous changes in $[Ca^{2+}]_i$ in single rat pancreatic B cells, 577–586
Glycogen synthase and insulin receptor, dephosphorylation of, inhibited by high levels of cytosolic free calcium, 423–430
Growth hormone-releasing hormone and somatostatin, calcium oscillations and calcium regulation by, in calcium homeostasis in bovine somatotrophs, 403–414
GTP and Ca^{2+} on inositol 1,4,5-trisphosphate induced Ca^{2+} release from permeabilized rat exocrine pancreatic acinar cells, effect of, 1–10
GTP-Sensitivity of the energy-dependent Ca^{2+} storage pool in permeabilized pancreatic acinar cells, 587–598

H

HeLa cells, Ca^{2+} oscillations induced by histamine H_1 receptor stimulation, Fura–2 and patch clamp analysis, 165–176
Hepatocellular injury, Ca^{2+}-dependent and independent mitochondrial damage in, 335–341
Hepatocyte calcium oscillator, 87–95
Hepatocytes (rat), regulation of plasma membrane permeability to calcium in primary cultures of rat hepatocytes, 559–575
Hepatocytes, spatial and temporal organization of calcium signalling in, 111–126
Heterogeneous changes in $[Ca^{2+}]_i$ induced by glucose, tolbutamide and K^+ in single rat pancreatic B cells, 577–586
High voltage activated Ca^{2+} currents in the adult rat sensory neuron, $[Ca^{2+}]_i$ recordings and the inactivation of the, 599–608
Histamine H_1 receptor stimulation induces Ca^{2+} oscillations in HeLa cells, Fura–2 and patch clamp analysis, 165–176
Homeostasis (calcium) in bovine somatotrophs, calcium oscillations and calcium regulation by growth hormone-releasing hormone and somatostatin, 403–414
Hormonal stimulation, effects of, compartmental analysis of $^{45}Ca^{2+}$ efflux in perfused rat liver, 743–753
Hormone biosynthesis, receptors and secretion, model for intracellular calcium signaling and the coordinate regulation of, 255–268
25-Hydroxycholesterol, the effect of, on accumulation of intracellular calcium, 467–476

I

Image and spectrofluorimetric recordings of spontaneous and lectin-induced cytosolic calcium oscillations in Jurkat T cells, 325–334
Increased intracellular calcium is associated with progression of HPV–18 immortalized human

keratinocytes to tumorigenicity, 343–349
Indo–1, evidence that binding of, to cardiac myocyte protein does not markedly change K_d for Ca^{2+}, 415–422
Indo–1, high-resolution measurement and calibration of Ca^{2+}-transients in guinea-pig atrial myocytes under voltage clamp, 269–277
Indo–1 used to detect, cytokinin increases intracellular Ca^{2+} in *Funaria*, 675–681
Inositol 1,4,5 trisphosphate (IP_3), decavanadate displaces IP_3 from its receptor and inhibits IP_3 induced Ca^{2+} release in permeabilized pancreatic acinar cells, 735–742
Inositol 1,4,5-trisphosphate (D-*myo*-) analogs, calcium release activities of, are quantized, 395–401
Inositol 1,4,5-trisphosphate increases myoplasmic [Ca^{2+}] in isolated muscle fibers, depolarization enhances its effects, 543–557
Inositol 1,4,5-trisphosphate induced Ca^{2+} release from permeabilized rat exocrine pancreatic acinar cells, effect of GTP and Ca^{2+} on, 1–10
Inositol trisphosphate (purified) receptor from smooth muscle forms an IP_3-gated and heparin-sensitive Ca^{2+} channel in planar bilayers, 505–514
Inositol trisphosphate, characterization of calcium transients induced by intracellular photorelease of, in mouse ovarian oocytes, 457–465
Inositol trisphosphate production or voltage-dependent Ca^{2+} channels (Ca^{2+}-stimulated) as key positive feedback elements in cytosolic Ca^{2+} oscillations in REF52 fibroblasts, 153–164
Insulin receptor and glycogen synthase, dephosphorylation of, inhibited by high levels of cytosolic free calcium, 423–430
Intracellular Ca^{2+} concentrations, determination of using Fura–2 and the ratio method, 29–38
Intracellular calcium concentration recordings and the inactivation of the high voltage activated Ca^{2+} currents in the adult rat sensory neuron, 599–608
Intracellular free calcium concentration in the blowfly retina studied by Fura–2, 695–712
Ionomycin and TRH in bovine anterior pituitary cells, ammonium ions mobilize calcium from an internal pool which is insensitive to, 301–312

J

Jurkat T cells, spectrofluorimetric and image recordings of spontaneous and lectin-induced cytosolic calcium oscillations in, 325–334
Jurkat T-cells, myristic acid inhibits CD_3-induced Ca^{2+} signals in, 449–455

K

Keratinocytes (HPV–18 immortalized human) progression to tumorigenicity is associated with increased intracellular calcium, 343–349

L

Liver (perfused rat), compartmental analysis of $^{45}Ca^{2+}$ efflux in, effects of hormonal stimulation, 743–753

M

Macrophage death, high and low cytosolic Ca^{2+}-induced (Hypothesis), 381–384
Mandibular (mouse) cell line (ST885), diphenylamine-2-carboxylate (DPC) reduces calcium influx in a, 441–447
Measurement of mitochondrial and non-mitochondrial Ca^{2+} in isolated intact hepatocytes, a critical re-evaluation of the use of mitochondrial inhibitors, 431–439
Mg^{2+} dependency in a post-nuclear particulate fraction of bovine adrenal cortex, of two calcium transport systems, 51–60
Mitochondria and endoplasmic reticulum in relation to fertilization, roles of calcium pools in sea urchin eggs, 289–299
Mitochondrial damage, Ca^{2+}-dependent and independent, in hepatocellular injury, 335–341
Model based on Ca^{2+}-induced Ca^{2+} release of signal-induced Ca^{2+} oscillations, 73–85
Model for intracellular calcium signaling and the coordinate regulation of hormone biosynthesis, receptors and secretion, 255–268
Model, two-pool, of cytoplasmic calcium oscillations, 63–72
Modelling receptor-controlled intracellular calcium oscillators, 97–109
Muscle (adult *Xenopus* leg), neural regulation of calmodulin in, 683–693
Muscle (developing skeletal) cells of normal and mutant mice foetuses with 'muscular dysgenesis', barium currents in, 727–733
Muscle cells (mammalian cardiac and vascular smooth), Ca^{2+}-oscillations and Ca^{2+}-waves in, 241–254
Muscular dysgenesis, barium currents in developing skeletal muscle cells of normal and mutant mice foetuses with, 727–733
Myocardial function in rat hearts, intracellular endocardial calcium and, 39–50
Myocyte (cardiac) protein, binding of Indo–1 to, does not markedly change K_d for Ca^{2+}, 415–422
Myocytes (guinea-pig atrial), high-resolution measurement and calibration of Ca^{2+}-transients using Indo–1 under voltage clamp, 269–277
Myocytes (rat ventricular), effect of low temperature on the cytosolic free Ca^{2+}, 11–18
Myoplasmic [Ca^{2+}] in isolated muscle fibers increased by inositol 1,4,5-trisphosphate, depolarization enhances its effects, 543–557
Myristic acid inhibits CD_3-induced Ca^{2+} signals in Jurkat T-cells, 449–455

N

Neural regulation of calmodulin in adult *Xenopus* leg muscle, 683–693
Neuron (adult rat sensory), $[Ca^{2+}]_i$ recordings and the inactivation of the high voltage activated Ca^{2+} currents in, 599–608
Nitrendipine-induced inhibition of calcium influx in a human T-cell clone, role of cell depolarization, 313–323

O

Oocytes (hamster), repetitive calcium transients in, 205–216
Oocytes (mouse ovarian), characterization of calcium transients induced by intracellular photorelease of $InsP_3$ in, 457–465
Oocytes (*Xenopus*), the four dimensions of calcium signalling in, 217–227
Oscillating calcium signals in pancreatic acinar cells, acetylcholine and cholecystokinin induce different patterns of, 145–151
Oscillations (Ca^{2+}) induced by histamine H_1 receptor stimulation in HeLa cells, Fura–2 and patch clamp analysis, 165–176
Oscillations (calcium) and Ca^{2+}-waves in mammalian cardiac and vascular smooth muscle cells, 241–254
Oscillations (calcium) in endothelial cells, 127–134
Oscillations (calcium) in pancreatic acinar cells, Generation and spreading of Ca^{2+} signals, 135–144
Oscillations (cytoplasmic calcium) in clusters of pancreatic β-cells exposed to glucose, propagation of, 229–240
Oscillations (cytosolic Ca^{2+}) in REF52 fibroblasts, Ca^{2+}-stimulated IP_3 production or voltage-dependent Ca^{2+} channels as key positive feedback elements, 153–164
Oscillations (cytosolic calcium) in Jurkat T cells, spontaneous and lectin-induced, spectrofluorimetric and image recordings of, 325–334
Oscillations, cytoplasmic calcium, a two pool model, 63–72
OSCILLATIONS IN CELL CALCIUM (Special Issue), 61–268
Oscillations, signal-induced Ca^{2+}, properties of a model based on Ca^{2+}-induced Ca^{2+} release, 73–85
Oscillator, hepatocyte calcium, 87–95
Oscillators, modelling receptor-controlled intracellular calcium, 97–109
Osteoblast-like cells, prostaglandins enhance parathyroid hormone-evoked increase in free cytosolic calcium concentration in, 609–622

P

Pancreatic β-cells exposed to glucose, propagation of cytoplasmic Ca^{2+} oscillations in clusters of, 229–240
Pancreatic acinar cells (permeabilized), decavanadate displaces inositol 1,4,5 trisphosphate (IP_3) from its receptor and inhibits IP_3 induced Ca^{2+} release in, 735–742
Pancreatic acinar cells, acetylcholine and cholecystokinin induce different patterns of oscillating calcium signals, 145–151
Pancreatic acinar cells, Ca^{2+} oscillations, generation and spreading of Ca^{2+} signals, 135–144
Pancreatic acinar cells, dose-dependency in spatial dynamics of $[Ca^{2+}]_c$ in, 533–542
Pancreatic acinar cells, effect of GTP and Ca^{2+} on inositol 1,4,5-trisphosphate induced Ca^{2+} release from permeabilized rat exocrine, 1–10
Pancreatic acinar cells, generation and spreading of Ca^{2+} signals, receptor-activated cytoplasmic Ca^{2+} oscillations in, 135–144
Pancreatic acinar cells, GTP-sensitivity of the energy-dependent Ca^{2+} storage pool in permeabilized, 587–598
Pancreatic B cells (single rat) – glucose, tolbutamide and K^+ induce heterogeneous changes in $[Ca^{2+}]_i$ in, 577–586
Parathyroid hormone-evoked increase in free cytosolic calcium concentration enhanced by prostaglandins in osteoblast-like cells, 609–622
Patch clamp analysis and Fura–2, Ca^{2+} oscillations induced by histamine H_1 receptor stimulation in HeLa cells, 165–176
PDGF-stimulated A172 cells, calcium channels in, open after intracellular calcium release and are not voltage-dependent, 477–491
Photorelease (intracellular) of $InsP_3$ induces calcium transients in mouse ovarian oocytes, characterization of, 457–465
Pituitary cells (bovine anterior), ammonium ions mobilize calcium from an internal pool which is insensitive to TRH and ionomycin in, 301–312
Plant cells (embryogenic), digitonin-aided loading of Fluo–3 into, 515–521
Plasma membrane permeability to calcium in primary cultures of rat hepatocytes, regulation of, 559–575
Platelets (rat), barbiturates inhibit intracellular Ca^{2+} rise induced by thrombin in, 645–654
Platelets (single blood), fluorescence digital image analysis of serotonin-induced calcium oscillations in, 177–184
Pool (energy-dependent Ca^{2+} storage), GTP-sensitivity of, in permeabilized pancreatic acinar cells, 587–598
Pools (calcium) in sea urchin eggs, roles of endoplasmic reticulum and mitochondria in relation to fertilization, 289–299
Potassium ion depolarization and Na^+/Ca^{2+} exchange, synaptosomal $[Ca^{2+}]_i$ as influenced by, 623–634
Potassium ions, glucose and tolbutamide induce heterogeneous changes in $[Ca^{2+}]_i$ in single rat pancreatic B cells, 577–586
Prostaglandins enhance parathyroid hormone-evoked increase in free cytosolic calcium concentration in osteoblast-like cells, 609–622

R

Ratio method for determination of intracellular Ca^{2+} concentrations, reassessment of Fura–2 and the, 29–38
Receptor-activated cytoplasmic Ca^{2+} oscillations in pancreatic acinar cells, generation and spreading of Ca^{2+} signals, 135–144
Receptor-controlled intracellular calcium oscillators, modelling, 97–109
Receptors, hormone biosynthesis and secretion, model for intracellular calcium signaling and the coordinate regulation of, 255-268
Regulation of intracellular calcium homeostasis in *Trypanosoma cruzi*, effects of calmidazolium and trifluoperazine, 361–369
Release (calcium) activities of D-myo-inositol 1,4,5-trisphosphate analogs are quantized, 395–401

Retina (blowfly), intracellular free calcium concentration in, studied by Fura–2, 695–712
S-100 protein biology, perspectives in, 713–726
Sea urchin eggs, endoplasmic reticulum and mitochondria in relation to fertilization, roles of calcium pools, 289–299
Secretion, hormone biosynthesis and receptors, model for intracellular calcium signaling and the coordinate regulation of, 255–268
Serotonin-induced calcium oscillations in single blood platelets, fluorescence digital image analysis of, 177–184
Signal-induced Ca^{2+} oscillations, properties of a model based on Ca^{2+}-induced Ca^{2+} release, 73–85
Signalling (calcium) in hepatocytes, spatial and temporal organization of, 111–126
Signalling (calcium) in *Xenopus* oocytes, the four dimensions of, 217–227
Signalling (intracellular calcium) and the coordinate regulation of hormone biosynthesis, receptors and secretion, model for, 255–268
Signals (calcium), generation and spreading of, receptor-activated cytoplasmic Ca^{2+} oscillations in pancreatic acinar cells, 135–144
Signals (oscillating calcium) in pancreatic acinar cells, cholecystokinin and acetylcholine induce different patterns of, 145–151
Sodium-calcium exchange, calcium export by, in bovine chromaffin cells, 493–504
Sodium/calcium exchange and K^+ depolarization, synaptosomal $[Ca^{2+}]_i$ as influenced by, 623–634
Somatostatin and growth hormone-releasing hormone, calcium oscillations and calcium regulation by, in calcium homeostasis in bovine somatotrophs, 403–414
Somatotrophs (bovine) calcium homeostasis in, calcium oscillations and calcium regulation by growth hormone-releasing hormone and somatostatin, 403–414
Spatial and temporal organization of calcium signalling in hepatocytes, 111–126
Spectrofluorimetric and image recordings of spontaneous and lectin-induced cytosolic calcium oscillations in Jurkat T cells, 325–334
Synaptosomal $[Ca^{2+}]_i$ as influenced by Na^+/Ca^{2+} exchange and K^+ depolarization, 623–634

T

T-cell clone, nitrendipine-induced inhibition of calcium influx in a, role of cell depolarization, 313–323
Temperature on the cytosolic free Ca^{2+} in rat ventricular myocytes, effect of low, 11–18
Temporal and spatial organization of calcium signalling in hepatocytes, 111–126
Thrombin induces intracellular Ca^{2+} rise in rat platelets which is inhibited by barbiturates, 645–654
Tolbutamide, glucose and K^+ induce heterogeneous changes in $[Ca^{2+}]_i$ in single rat pancreatic B cells, 577–586
Transients (calcium), characterization of, induced by intracellular photorelease of $InsP_3$ in mouse ovarian oocytes, 457–465
Transients (calcium), high-resolution measurement and calibration of using Indo–1 in guinea-pig atrial myocytes under voltage clamp, 269–277
Transients (repetitive calcium) in hamster oocytes, 205–216
Transport systems for calcium (two) are distinguished on the basis of their Mg^{2+} dependency in a post-nuclear particulate fraction of bovine adrenal cortex, 51–60
TRH and ionomycin in bovine anterior pituitary cells, ammonium ions mobilize calcium from an internal pool which is insensitive to, 301–312
Trifluoperazine and calmidazolium, effects of, regulation of intracellular calcium homeostasis in *Trypanosoma cruzi*, 361–369
Trypanosoma cruzi, regulation of intracellular calcium homeostasis in, effects of calmidazolium and trifluoperazine, 361–369
Tumorigenicity, increased intracellular calcium is associated with progression of HPV–18 immortalized human keratinocytes to, 343–349

V

Voltage clamp, high-resolution measurement and calibration of Ca^{2+}-transients using Indo–1 in guinea-pig atrial myocytes, 269–277
Voltage-dependent Ca^{2+} channels or IP_3 production (Ca^{2+}-stimulated) as key positive feedback elements in cytosolic Ca^{2+} oscillations in REF52 fibroblasts, 153–164
